# API Automation documentation:

Automation of API testcases were done by using **JavaScript** inside the tests console of **postman tool.**

The scripts can be executed by **Newman** as per the following steps

## Prerequisites for execution:

- Postman tool downloaded
- Importing the collection and the environment files provided by me
- Cloning the repo to set up local environment from the URL : https://github.com/bestbuy/api-playground/
- Cd to the location where the repo installed in your machine and run >>>> npm install then>>> npm start
- run >>>> npm install -g newman
- go to the folder containing the collection and environment files
- Run>>>>  newman run BestBuyAPI.postman_collection.json -e Instabug.BestBuy.postman_environment.json
